

Light curtains

Jelitto Star

ILLUMINATIONEN

Our LED light curtains can be used in a variety of ways, so you can use these for lighting Trees, buildings or objects, use to enhance these individually and as a highlight - not only at Christmas time!

The curtains are two meters wide, can be coupled and have the hanger lengths 1.5 m, 3 m and 5 m. For an individual design we are happy to help.

Example tree lighting:

The carrier cable was perpendicular to trunk attached.
The hangers were subsequently attached the branches along and the end attached to a small branch.
So the branches can grow without demolish hangers or under to bring tension.
In an emergency, the small branch gives way and the hangers remain undamaged.

Example building lighting:

The carrier cable was attached to the roof.
The hangers were loose down depended.
So they follow the shape of the roof.
To emphasize the contours of the roof, care was taken that the hangers end at the edge of the roof and the accent dormer.
